Vol. XII.—THE DOCTOR'S WHO'S WHO: A Biographical Dictionary of Living Practitioners in all parts of the world. Edited by Charles Wells Moulton.

Undertakings of this kind, it is generally found, prove more arduous than at first anticipated, and this series of books has proven no exception to the rule. As completed, however, it will stand as something unique in the book world, and will illustrate the richness of the purely literary side of medical literature.

We have called this the first edition of THE DOCTOR'S WHO'S WHO for the reason that it is anticipated that another edition will be demanded by the Public in due season. When the Editor began the collection of material for this volume, his ambition was to make it complete along the line marked out for him by the Publishers,—namely, to include in its pages every foreign physician of extraordinary repute, and every American physician who has one of the following requirements, either past or present:

Authors of medical works published in book form.

Professors in recognized colleges conferring the M. D. degree.

Editors of prominent medical journals.

Superintendents of important State medical institutions.

Presidents of important medical societies.

Although the Editor had much information at hand, it will be readily understood that a work of this kind would not be made authentic without the co-operation of the doctors "who are who." Our request for data met, in most instances, with a prompt response. We relied upon the doctors, and where names are omitted, that should appear, we must lay the charge to the doctor's oversight, not the publishers'. This applies to the name that is known to everyone, as well as to the scientific, if less famous, brother.

Returning our thanks for the generous co-operation of the many, and hoping to add the delinquents, as well as the newcomers, to a new edition at no distant day, we take leave of our "dear doctors," herewith.

CHARLES WELLS MOULTON.
